DDA, DDC, DDE

Digital Dosing™

The SMART Digital S generation DDA, DDC and DDE with powerful variable-speed stepper motor brings state-of-the-art technology to perfection. Combined expert knowledge and patented solutions set future standards. Traditional technologies, such as stroke length or stroke frequency adjustment with synchronous motor or solenoid drive, become a thing of the past.

Unique flexibility with only a few variants

The included click-stop mounting plate makes the pump more flexible. Three different positions are possible without using any additional accessories, such as wall brackets. Service and pump exchange can now be done easily by clicking the pump in and out of the mounting plate.

The control cube on the DDA and DDC pump can be lifted and turned easily into three different positions: front, left or right.

TM041662

Modularity of the control cube

A turn-down ratio of up to 1:3000, a wide supply voltage range (100-240 V; 50/60 Hz), combined connection sets and other features reduce the models and variants to a minimum.

Precise and easy setting / usability and interaction

The operator can easily install the pump and set it to discharge exactly the quantity of dosing liquid required for the application. In the display, the setting of the pump is read out directly, the flow is shown in ml/h, l/h, or gph.

The click wheel (turn-and-push knob) and the graphical LC display with plain-text menu in more than 25 languages make commissioning and operation intuitive. As the LCD is backlit in different colours, the pump status can be seen from a distance (traffic-light concept).

TM041157

Display DDA, DDC

Thanks to a variety of operation modes, signal inputs and outputs, the pump can easily be integrated into every process.

Advanced process reliability

An intelligent drive and microprocessor control ensures that dosing is performed precisely and with low pulsation, even if the pump is dosing high-viscosity or degassing liquids. Malfunctions, caused by, for example, air bubbles, are detected quickly by the maintenance-free FlowControl system, and then displayed in the alarm menu.

The AutoFlowAdapt function automatically adjusts the pump according to the process conditions, such as varying backpressure. The integrated flow measurement makes additional monitoring and control equipment redundant.

Designed to save costs

In general, the investment for a dosing pump installation is low compared to its life cycle costs, including the cost of the chemicals. The following features make the SMART Digital S DDA, DDC and DDE pumps contribute to low life cycle costs:

- no underdosing or overdosing due to high dosing accuracy and FlowControl
- longer maintenance intervals due to the universal chemical resistance of the full-PTFE diaphragm
- reduced energy consumption due to the state-of-the-art drive technology.

Three application-oriented type ranges

DDA is a high-end pump range for extended flow and pressure ranges with sensor-based FlowControl and measurement functions for challenging industrial applications such as the following:

- process water
- food and beverage
- ultrafiltration and reverse osmosis
- pulp and paper
- boiler feed water
- CIP (Cleaning-In-Place).

DDC is a user-friendly pump range with standard inputs and outputs for common applications like the following:

- drinking water
- waste water
- swimming pool water
- cooling tower
- chemical industry.

DDE is a low-budget pump range with basic functions including manual operation or control via PLC for OEM applications, for example:

- car wash
- irrigation.

2. Identification

[Level control](#)

Functional description

The electronically controlled variable-speed motor (stepper motor) of the DDA, DDC and DDE pumps provides optimum control of the stroke speed. The duration of each discharge stroke varies according to the capacity set, resulting in optimum discharge flow in any operating situation, while the duration of each suction stroke is constant. See the figure below.

The advantages are as follows:

- The pump always operates at full stroke length, irrespective of the capacity set, which ensures optimum accuracy, priming and suction.
- A capacity range of up to 1:3000 (turn-down ratio) results in less variants and spare parts
- Smooth and continuous dosing ensures an optimum mixing ratio at the injection point without static mixers.
- There is a significant reduction of pressure peaks, preventing mechanical stress on wearing parts such as diaphragm, tubes, connections, resulting in extended maintenance intervals.
- The installation is less affected by long suction and discharge lines.
- Dosing of high-viscosity and degassing liquids (SlowMode) is easier.

The optimum dosing control shown below applies to any operation mode.

Relation between stroke-frequency adjustment and capacity

Control cube DDA and DDC

DDA and DDC pumps are supplied with front-mounted control cube. The position of the control cube can easily be changed by unfastening 2 screws, lifting the cube, turning it to the left or to the right, and fastening both screws again.

TM069584

Two of three possible control cube positions

Operating elements, DDA and DDC

The pump operating panel includes a display and operating elements.

TM041188

Pos.	Description
1	Graphical LC display
2	Click wheel
3	Start/Stop key
4	100% key

Click wheel

The click wheel is used for navigating through the menus, selecting settings and confirming them.

Turning the click wheel clockwise moves the cursor clockwise in increments on the display. Turning the click wheel counterclockwise moves the cursor counterclockwise.

Start/Stop key

The Start/Stop key is used for starting and stopping the pump.

100% key

The pump doses at maximum flow regardless of the operation mode.

Operating elements, DDE

TM041150

Pos.	Description
1	Logarithmic scale
2	Capacity adjusting knob
3	Status LED "Pulse" (only DDE-PR/P control variant)
4	Operation mode key (only DDE-PR/P control variant)
5	Status LED "Manual"
6	100% key (only DDE-PR/P control variant)
7	Mechanical lock

Menu

The DDA and DDC dosing pumps feature a user-friendly plain-text menu. The menu consists of 4 tabs: Operation; Info; Alarm; Setup. During initial start-up, all menu texts appear in English. The menu can be set to display other languages.

The following example applies to DDA pumps:

TM041553

Menu overview (example of main menus)

The menu text appears in more than 25 languages on a big graphical display, backlit in four different colours according to the traffic light concept.

Display	Fault	Pump status
White	-	Stop Standby
Green	-	Running
Yellow	Warning	Stop Standby Running
Red	Alarm	Stop Standby

Operation modes

Manual control

The pump ensures constant dosing according to the quantity set in l/h or ml/h or gph by the click wheel. The pump automatically changes between the measuring units.

Setting range

Pump type	Setting range ³⁾	
	From [l/h]	To [l/h]
DDA 7.5-16	0.0025	7.5
DDA 12-10	0.0120	12.0
DDA 17-7	0.0170	17.0
DDA 30-4	0.0300	30.0
DDC 6-10	0.0060	6.0
DDC 9-7	0.0090	9.0
DDC 15-4	0.0150	15.0
DDE 6-10	0.0060	6.0
DDE 15-4	0.0150	15.0

³⁾ When the SlowMode function is enabled, the maximum flow is reduced, see section SlowMode.

Related information

[SlowMode](#)

Pulse control

The pump doses in proportion to an external potential-free pulse signal, for example, from a water meter. There is no direct relation between pulses and dosing strokes. The pump automatically calculates its optimal speed to ensure that the required quantity is dosed for each incoming pulse.

For DDA and DDC:

The quantity to be dosed is set in ml/pulse. The pump adjusts its speed according to two factors:

- the frequency of external pulses
- the set quantity per pulse.

Setting range

Pump type	Setting range [ml/pulse]
DDA 7.5-16	0.0015 - 14.9
DDA 12-10	0.0029 - 29.0
DDA 17-7	0.0031 - 31.0
DDA 30-4	0.0062 - 62.0
DDC 6-10	0.0016 - 16.2
DDC 9-7	0.0017 - 16.8
DDC 15-4	0.0032 - 31.6

The frequency of external pulses is multiplied by the set quantity. If the product exceeds the maximum flow of the pump, a maximum of 65,000 pulses can be stored for later processing with the Memory pulse function, when activated.

For DDE-PR, DDE-P control variant:

The dosing quantity per pulse is adjusted with the adjustment knob according to a scale from 0.1 to 100 % of the stroke volume. The pump adjusts its speed according to two factors:

- the frequency of external pulses
- the set percentage of stroke volume.

Setting range, DDE-PR, DDE-P

Pump type	Setting range [ml/pulse]
DDE 6-10	0.0008 - 0.81
DDE 15-4	0.0016 - 1.58

Analog 0/4-20 mA control

This section applies to the DDA and DDC-AR control variant.

The pump ensures dosing according to an external analog signal. The dosed capacity is proportional to the input value in mA.

Operation mode	Input signal	Dosing capacity
4-20	$\leq 4.1 \text{ mA}$	0 %
	$\geq 19.8 \text{ mA}$	100 %
0-20	$\leq 0.1 \text{ mA}$	0 %
	$\geq 19.8 \text{ mA}$	100 %

TM041120

0/4-20 mA control

This section applies to the DDA.

With the analog scaling function, the curve can be individually drawn between two arbitrary points: I_1/Q_1 and I_2/Q_2 .

TM041575

Analog scaling

Pos.	Description
Q [%]	Dosing capacity
[mA]	Input signal

Pulse-based batch control

This section applies to the DDA.

The set quantity is dosed in batches within the set dosing time (t_1). A batch is dosed every time the pump receives an external pulse. If the pump receives new pulses before a batch is completed, these pulses are ignored. In the event of an interrupt, such as external stop or alarm, incoming pulses are ignored. After the interrupt ends, a new batch is dosed with the next incoming pulse.

TM041105

Pulse-based batch control

Pos.	Description
V	Batch volume
I	Pulse
t	Time

Setting range

Pump type	Setting range		
	From [ml/batch]	To [l/batch]	Resolution [ml] ⁴⁾
DDA 7.5-16	0.74	999	0.09
DDA 12-10	1.45	999	0.18
DDA 17-7	1.55	999	0.19
DDA 30-4	3.10	999	0.39

⁴⁾ Due to the digital motor control, down to 1/8 of the dosing volume can be dosed.

Dosing timer cycle

This section applies to the DDA.

After a start delay (t_2), the set batch volume is repeatedly dosed in the set cycle time (t_3). The dosing time (t_1) can be adjusted. Batch dosing is stopped during any interrupt, for example, power supply failure or external stop, while the time continues running in the background (real-time clock). After the interrupt ends, batch dosing proceeds according to the current status in the timeline.

TM041107

Dosing timer cycle

Pos.	Description
V	Batch volume
t1	Dosing time
t2	Start delay
t3	Cycle time

Setting range

The batch volume setting range corresponds to the pulse-based batch control setting range.

Dosing timer week

This section applies to the DDA.

The integrated real-time clock also features batch dosing based on a weekly period. There is a maximum of 16 procedures per week. Each dosing procedure consists of the following:

- batch volume
- dosing time
- start time
- 1 to 7 weekdays (Monday to Sunday).

In case several procedures overlap, the procedure with the highest flow rate has the highest priority. Batch dosing stops during any interrupt, for example, power supply failure or external stop, while the time continues running in the background (real-time clock). After the interrupt ends, batch dosing proceeds according to the current status in the timeline.

0:00							
6:00	1		1		1		1
12:00						4	4
18:00		2		2			
0:00	3	3	3	3	3	3	3

TM041576

Dosing timer week (example with 4 procedures)

Pos.	Description
1	Mo
2	Tu
3	We
4	Th
5	Fr
6	Sa
7	Su

Setting range

The batch volume setting range corresponds to the pulse-based batch control setting range.

Functions

SlowMode

This section applies to the DDA, DDC.

When the SlowMode function (anti-cavitation) is selected, the pump extends and smooths its suction stroke. This results in a softer suction stroke.

The SlowMode function is used in the following situations:

- when pumping high-viscosity liquids
- when pumping degassing liquids
- when the suction line is long
- when the suction lift is high.

Depending on the application, the motor speed during the suction stroke can be reduced individually to approximately 50 % or 25 % of the normal motor speed.

The maximum pump capacity is reduced accordingly. See sections DDA and DDC for further details.

Related information

[DDA and DDC](#)

Auto de-aeration

This section applies to the DDA.

The auto de-aeration function avoids breakdown of the dosing process due to air-locking when dosing degassing liquids, such as sodium hypochlorite. During long dosing breaks, for example at the weekend or overnight, air-bubbles can form in the suction line and get into the dosing head. If there is too much air in the dosing head and the dosing process starts again, no liquid is dosed (air-lock). Software-controlled diaphragm movements at regular intervals encourage the air bubbles to rise and get out of the dosing head.

These movements are executed in the following conditions:

- when the pump is not stopped
- during dosing breaks (for example, external stop or no incoming pulse).

Calibration

This section applies to the DDA, DDC.

The pump is calibrated in the factory at the nominal pressure of the respective pump type (see Technical data section for DDA and DDC for the maximum pressure). After start-up, the dosing pump can be calibrated for the actual installation to ensure that the displayed value (ml, l or gph) is correct. A calibration program in the setup menu facilitates this process. The AutoFlowAdapt function keeps the dosing precision (DDA-FCM control variant), even if the backpressure changes. For the description of the AutoFlowAdapt function, see section AutoFlowAdapt.

Related information

[AutoFlowAdapt](#)

External stop

This section applies to the DDA, DDC, DDE-PR and DDE-P.

With the external stop function, the pump can be stopped from a remote place via an external contact. It is not recommended to switch on and off the power supply as it was usual when working with a conventional dosing pump. When working with microprocessor-controlled digital dosing pumps, the external stop signal has to be used to keep the optimal dosing precision and prevent damages to the electronics.

When activating the external stop signal, the pump changes from running to standby. The operation display shows an activated external stop. The signal input can be set to normally open (default) or normally closed contact.

Counters

This section applies to the DDA, DDC.

The pump displays resettable and non-resettable counters in the info menu tab.

Counter	Description	Resettable
Volume	Accumulated dosed quantity in litres or US gallons	Yes
Operating hours	Accumulated number of operating hours (power-on)	No
Motor runtime	Accumulated number of motor runtime hours	No
Strokes	Accumulated number of dosing strokes	No
Power on/off	Accumulated number of times the mains supply has been switched on	No

Service display

This section applies to the DDA, DDC.

Due to the optimised construction and the smooth digital dosing principle, the service periods are more than twice as long as that of conventional pumps. However, the wear parts have to be exchanged at regular intervals to keep the dosing precision and process reliability at a high level. The service display in the pump shows when service of the wear parts is required. The displayed service kit product number makes service more convenient. The following information is presented in the Info display:

Display		Description
Service	-	No service is required.
	Soon	Order parts for service soon.
	Now	Service must be performed now.
Service kit	8-digit Grundfos product number	The service kit contains all parts needed for standard maintenance: diaphragm and valves.
Reset service system		After performing the service, reset the system.

The following service messages appear, depending on what happens first:

Display	Motor runtime [h]	Regular intervals [months] ⁵⁾
Service soon	7,500	23
Service now	8,000	24

⁵⁾ Applies to DDA only

In case of difficult liquids, the service intervals may be shorter and service has to be performed earlier.

Level control

This section applies to the DDA, DDC, DDE-PR and DDE-P.

The pump can be connected to a dual level control unit for monitoring the chemical level in the tank. The pump can react to two level signals:

Level sensors	Pump reaction ⁶⁾	
	DDA, DDC	DDE-PR, DDE-P
 Low-level signal	The display is yellow (Warning). The Low-level signal is flashing. The pump continues running.	The LED lights up in yellow. The pump continues running.
 Empty tank signal	The display is red (Alarm). The Empty tank signal is flashing. The pump stops.	The LED lights up in red. The pump stops.

⁶⁾ Depending on the pump model and settings, the relay outputs can be activated, see section Relay output.

Related information

[Relay output](#)

Relay output

This section applies to DDA, DDC-AR and DDE-PR.

The pump can activate 2 external signals by built-in relays switched via internal potential-free contacts. Depending on the process control requirements, the following relay output settings can be selected:

For the DDA and DDC-AR:

Signal		Description
Relay 1	Relay 2	
Alarm ⁷⁾	Alarm	The display is red, the pump stops (for example Empty signal).
Warning ⁷⁾	Warning	The display is yellow, the pump is running (for example Low-level signal).
Stroke signal	Stroke signal	It signals each full stroke.
Pump dosing	Pump dosing ⁷⁾	The pump is running and dosing.
Pulse input	Pulse input	It signals each incoming pulse from pulse input.
Bus control	Bus control	It is activated by a command in the bus communication. See section Bus communication (only DDA).
	Timer cycle	Timer can be set in menu: on-time, cycle-time, start delay (only DDA)
	Timer week	Timer can be set in menu: procedure, on-time, start time and weekdays (only DDA)

Signal		Description
Relay 1	Relay 2	
Contact type		
NO ⁷⁾	NO ⁷⁾	Normally Open Contact
NC	NC	Normally Closed Contact

⁷⁾ Default setting

For the DDE-PR control variant:

Signal		Description
Relay 1	Relay 2	
Contact type		
Alarm ⁸⁾		Empty tank, motor blocked
	Low level ⁸⁾	Low level tank
	Stroke signal	Every completed stroke
	Pulse input	Every pulse coming in from pulse input
Contact type		
NO ⁸⁾	NO ⁸⁾	Normally Open Contact
NC	NC	Normally Closed Contact

⁸⁾ Default setting

Related information

[Bus communication](#)

Analog output

This section applies to the DDA.

In addition to the analog input (operation mode: analog 0/4-20 mA), the pump is also equipped with an analog 0/4-20 mA output signal. Depending on the process control requirements, the following analog output settings are available:

Setting	Description of analog output signal	Control variant		
		FCM	FC	AR
Output = Input	Analog feedback signal (not for master-slave application): the analog input signal is mapped 1:1 to the analog output.	X	X	X
Actual flow	Flow is measured in the dosing head. (See section Flow measurement.)	X	X ⁹⁾	X ⁹⁾
Backpressure	Backpressure is measured in the dosing head. (See section Pressure monitoring.)	X	X	
Bus control	It is set by a command in the bus communication. (See section Bus communication.)	X	X	X

⁹⁾ Output signal is calculated based on motor speed and pump status (target flow rate).

Related information

[FlowControl](#)

[Pressure monitoring](#)

[Bus communication](#)

Bus communication

This section applies to the DDA.

The pump is equipped with a built-in module for GENIbus communication. With the additional E-Box module (see section E-box for SMART digital S DDA), the pump can be integrated into a fieldbus network.

The bus communication possibilities enable remote monitoring and setting via the fieldbus system.

TM041640

DDA with E-box

Key lock and mechanical lock

For the DDA, DDC:

To protect the pump from maloperation, a key lock can be set by entering a 4-digit PIN code. When the pump is locked, it is still possible to navigate through the menus Alarm and Info, and to acknowledge alarms. Two levels of protection are available:

- Settings: the start/stop key and 100% key are still available.
- Settings + keys: the start/stop key and 100% key are also locked.

For temporary (2 minutes) or final deactivation, the 4-digit preset PIN code has to be entered again.

For the DDE:

The adjustment knob can be locked with a locking screw to fix the current setting.

Basic settings

This section applies to the DDA and DDC.

With load factory settings, the pump can be reset to the default settings. In addition, with save customer settings, the current configuration of the pump is stored and can be activated later by load customer settings. The latest saved configuration is stored in the memory.

Units

This section applies to the DDA and DDC.

It is possible to select metric units (litre/millilitre/bar) or US units (US gallons/psi). Depending on the operation mode and menu, the following units are displayed:

Operation mode/Function	Metric units	US units
Manual control	ml/h or l/h	gph
Pulse control	ml/pulse	ml/pulse
Analog 0/4-20 mA control	ml/h or l/h	gph
Batch control (pulse- or timer-based)	ml or l	gal
Calibration	ml	ml
Volume counter	l	gal
Pressure monitoring	bar	psi

Additional display

This section applies to the DDA and DDC.

The additional display function provides further useful status information, such as the target flow rate or the actual flow rate. The value is shown in the operation display together with the corresponding symbol.

TM041151

Additional display

Pos.	Description
1	Additional display

The following additional information can be selected:

Settings	Description
Default display	Depending on the operation mode:
	Q Actual flow (manual, pulse) ¹⁰⁾
	Q Target flow (pulse)
	↻ Input current (analog) ¹¹⁾
	∞ Remaining batch volume (batch, timer) ¹²⁾
	⏰ Time until next batch (timer) ¹²⁾
Dosed volume	V Total dosed volume, see section Counters
Actual flow	Q Actually measured flow ¹¹⁾
Backpressure	P Current backpressure in the dosing head ¹³⁾

¹⁰⁾ Only DDA-FCM control variant

¹¹⁾ Only DDA pumps and DDC-AR control variant

¹²⁾ Only DDA pumps

¹³⁾ Only DDA-FCM/FC control variant

FlowControl

This section applies to the DDA-FC/FCM control variant.

TM041641

DDA FlowControl

The pump monitors the dosing process of liquids when the FlowControl function is activated. While the pump operates, some influences, such as air bubbles, may cause reduced flow rates or even stop the dosing process. For optimal process safety and reliability, the activated FlowControl function immediately detects and displays the following malfunctions:

- overpressure
- discharge line burst
- air bubbles in the dosing head
- cavitation at the suction side
- suction valve leakage
- discharge valve leakage.

The unique FlowControl is based on an intelligent and maintenance-free sensor integrated in the dosing head. During the dosing process, the sensor measures the actual pressure and sends the measured value to the microprocessor in the pump. An internal indicator diagram is generated combining the actual pressure value with the diaphragm position (stroke length). The dosing process is monitored as the different malfunctions can immediately be detected due to their specific deviations in the curve. Compressible air bubbles, for instance, reduce the discharge phase and the stroke volume.

The sensitivity and delay of the FlowControl function can be adjusted individually.

FlowControl requires a minimum backpressure of 2 bar. Grundfos recommends an additional spring-loaded valve (approx. 3 bar) on the discharge side for dosing low capacities, that is, below 1 l/h.

TM041610

Indicator diagram

Pos.	Description
p	Pressure
S	Stroke length
1	Compression phase
2	Discharge phase
2a	Trouble-free dosing stroke
2b	Air bubbles disturbing the dosing stroke
3	Expansion phase
4	Suction phase

Pressure monitoring

This section applies to the DDA-FCM control variant.

The integrated pressure sensor measures the actual pressure of the system which is shown in the display. A maximum pressure can be set. If the pressure in the system exceeds the set maximum, for example, if there is a closed valve, the pressure monitoring function stops the dosing process immediately. As soon as the backpressure falls below the set maximum, the dosing process continues. In case the pressure drops below the minimum limit, for example, if an outlet line bursts, the pump stops and major chemical spills are prevented.

Pressure setting range

Flow measurement

This section applies to the DDA-FCM control variant.

The pump can precisely measure and display the actual dosing flow. Via the analog 0/4-20 mA output, the actual flow signal can easily be integrated in any process control system without any additional measurement equipment.

The Flow measurement function is based on an indicator diagram, see section FlowControl. Accumulating the length of each discharge stroke phase and multiplying it with the stroke frequency results in the actual flow displayed. Malfunctions, such as air bubbles or lower backpressure, result in a reduced or increased actual flow rate. When the AutoFlowAdapt function, see section AutoFlowAdapt, is activated, the pump compensates these influences by correcting the stroke speed.

AutoFlowAdapt

This section applies to the DDA-FCM control variant.

When activating the AutoFlowAdapt function, even environmental changes are compensated so that the required target flow rate is achieved. The integrated AutoFlowAdapt makes additional monitoring and control devices redundant. The AutoFlowAdapt function is based on the following factors:

- FlowControl: malfunctions are detected.
- Pressure monitoring: system pressure changes are detected.
- Flow measurement: deviations in the target flow are detected.

Examples:

- FlowControl detects air bubbles in the system. Due to a special motor drive strategy and a certain speed increase, the pump tries to keep the flow rate constant. This is especially important when dosing degassing liquids.
- In general, increasing system pressure reduces the stroke volume whereas falling system pressure increases the stroke volume. The AutoFlowAdapt function compensates this by automatically and continuously adapting the motor speed. Despite fluctuating system pressure, dosing accuracy is maintained.

4. Construction

DDA and DDC

Sectional drawing, DDA

Construction

The DDA and DDC pumps are motor-driven diaphragm dosing pumps consisting of the following main parts:

Dosing head: It has a patented design with a minimum clearance space optimised for degassing liquids. It is supplied with integrated de-aeration valve for priming and venting, complete with connection for a 4/6 mm or 0.17" x 1/4" tubing. DDA-FCM/FC pumps have an integrated pressure sensor in the dosing head.

Valves: The double-ball discharge and suction valve ¹⁴⁾ design allows for less clearance space, which is optimal for degassing liquids. Spring-loaded valves for higher viscosities are available as an option.

Connections: The robust and easy-to-use connection packages are optimal for various sizes of tubing or pipes.

Diaphragm: The full PTFE diaphragm is designed for long life and universal chemical resistance.

Flange: The flange is offered with separation chamber, safety diaphragm and drain hole.

Drive unit: It has a positive return crank with patented noiseless spur gear drive, energy recovery spring for high efficiency (only DDA), stepper motor, all mounted in a robust gear housing.

Control cube: It contains operation electronics with display, keys, click-wheel and protective cover.

Housing: It contains drive unit and power electronics with robust signal sockets. The housing can be clicked on the mounting plate.

¹⁴⁾ It is only for pumps up to 7.5 l/h with standard valves.

Min. pressure differential between suction and discharge side	[bar]	1	
Max. inlet pressure, suction side	[bar]	2	
Max. viscosity with spring-loaded valves ³¹⁾	[mPas] (= cP)	600	500
Max. viscosity without spring-loaded valves ³¹⁾	[mPas] (= cP)	50	
Min. internal hose/pipe diameter suction/discharge side ^{30) 32)}	[mm]	4	6
Min. internal hose/pipe diameter suction/discharge side (high viscosity) ³²⁾	[mm]	9	
Min./max. liquid temperature	[°C]	-10/45	
Min./max. ambient temperature	[°C]	0/45	
Min./max. storage temperature	[°C]	-20/70	
Max. relative humidity (non-condensing)	[%]	96	
Max. altitude above sea level	[m]	2000	

³⁰⁾ Data is based on measurements with water

³¹⁾ Maximum suction lift: 1 m, dosing capacity reduced (approx. 30 %)

³²⁾ Length of suction line: 1.5 m, length of discharge line: 10 m (at max. viscosity)

Electrical data		6-10	15-4
Voltage	[V]	100-240 V, - 10 %/+ 10 %, 50/60 Hz	
Length of power cable	[m]	1.5	
Max. inrush current for 2 ms (100 V)	[A]	8	
Max. inrush current for 2 ms (230 V)	[A]	25	
Max. power consumption P ₁	[W]	19	
Enclosure class		IP65, Type 4x	
Electrical safety class		II	
Pollution degree		2	

Signal input		6-10	15-4
Max. load for level input		12 V, 5 mA	
Max. load for pulse input		12 V, 5 mA	
Max. load for external stop input		12 V, 5 mA	
Min. pulse length	[ms]	5	
Max. pulse frequency	[Hz]	100	
Max. resistance in level/pulse circuit	[Ω]	1000	

Signal output		6-10	15-4
Max. ohmic load on relay output	[A]	0.5	
Max. voltage on relay output	[V]	30 VDC/30 VAC	

Weight and size		6-10	15-4
Weight (PVC, PP, PVDF)	[kg]	2.4	
Weight (stainless steel)	[kg]	3.2	
Diaphragm diameter	[mm]	44	50

Sound pressure	6-10	15-4
Max. sound pressure level [dB(A)]	60	

Approvals: CE, CB, CSA-US, NSF61, EAC, ACS, RCM

Technical data for CIP (Clean-In-Place) applications

Short-term temperature limits for maximum 40 minutes at maximum 2 bar operating pressure:

Max. liquid temperature for dosing head material PVDF	[°C]	85
Max. liquid temperature for dosing head material stainless steel	[°C]	120

7. Pump selection

DDA, standard range

Power supply: 1 x 100-240 V, 50/60 Hz (switch mode)

Mains plug: EU

Valves: Standard

E-box for SMART digital S DDA

The Grundfos E-box (Extension Box) is a plug-and-play fieldbus communication interface for the integration of SMART Digital S DDA dosing pumps (up to 30 l/h) into a fieldbus network. Fieldbus communication allows for using the DDA dosing pump in industrial automation systems (PLC, SCADA) where advanced remote control and monitoring functions are required:

- remote control of all settings, such as operation mode, flow rate, etc.
- remote monitoring of all parameters, such as measured flow, pressure, faults with cause, etc.

The E-box contains a standard Grundfos CIM (communication interface module) for data transmission between a fieldbus network and a Grundfos pump.

SMART Digital S DDA dosing pumps can be easily retrofitted with the E-box: it is simply placed between the pump and the mounting plate. The E-box has a connecting cable that is plugged directly into the pump.

Description	Product number

Max. power consumption		5 W
Max. relative humidity		96 %
Pollution degree		2
Enclosure class		IP65 according to IEC 60529 Type 4x
Electrical safety class		3
Min./max. ambient temperature		0/45 °C
Approvals		CE, CB, CSA-US, RCM
Weight		0.4 kg
GENIbus connection (E-box to pump)	Data protocol	GENIbus
	GENIbus connection type	Three-wire RS-485
	Transmission speed	9.6 kbits/s
	Cable length	160 mm

E-box 150 Profibus DP

Required pump software for retrofitting	V2.5 or higher
Profibus implementation class	DP-V0
Connection type	RS-485, two-wire (lines: A, B)
Recommended cable type	Screened, double-twisted pair
	Conductor cross-section: 0.34 - 1 mm ² AWG: 22-17
Maximum cable length	100 m at 12000 kbits/s
	1200 m at 9.6 kbits/s
Slave address (set in DDA display)	1-126
Line termination (set via DIP switches)	On/off
Supported data rates	9.6 - 12000 kbits/s
GSD file for system integration: http://net.grundfos.com/qr/i/GRUN0CD9	

E-box 200 Modbus RTU

Required pump software for retrofitting	V2.5 or higher
Connection type	RS-485, two-wire + common
Recommended cable type	Screened, twisted pair
	Conductor cross-section: 0.20 - 0.25 mm ² AWG: 24-23
Maximum cable length	1200 m
Slave address (set in DDA display)	1-247
Line termination (set via DIP switches)	On/off
Supported data rates	9600 / 19200 / 38400 bits/s

E-box 500 Ethernet

Required pump software for retrofitting	V2.5 or higher
Ethernet protocol	PROFINET IO/Modbus TCP (selected via rotary switch)
Application layer	DHCP, HTTP, Ping, FTP, SMTP, SNMP, Modbus TCP
Transport layer	TCP
Internet layer	Internet protocol V4 (IPv4)
Link layer	ARP, media access control (Ethernet)
Recommended cable type	Screened/unscreened, twisted-pair cables, CAT5, CAT5e or CAT6
Maximum cable length	100 m at 10/100 Mbits/s
Supported data rates	10 / 100 Mbits/s

Hoses

Hoses are available in various materials, sizes and lengths for small dosing pumps.

Foot valves FV

Foot valves are installed at the lower end of the inlet hose. They are available either without level indication or with low-level and empty-tank indication.

Foot valves include:

- weight
- strainer (mesh size approx. 0.8 mm)
- non-return valve
- hose connection set: 4/6 mm, 6/9 mm, 6/12 mm and 9/12 mm
- pipe connection set: threaded, Rp 1/4", internal thread (stainless steel).

Foot valves with low-level and empty-tank indication additionally include:

- reed-switch unit with two floaters
- 5 meters of cable with PE jacket
- M 12 plug to connect DDA, DDC, DDE or DDI dosing pump
- PE cap, Ø58 mm, for assembly in Grundfos cylindrical tanks, or for use with tank adapters.

The contact type of the low-level and empty-tank indication is factory-set to NO. The contact type can be set to NC by turning the floaters upside down.

Electrical data of the level indication:

- max. voltage: 48 V
- max. current: 0.5 A
- max. load: 10 VA.

Foot valves: without level indication (left), with level indication (right)

Rigid suction lances RSL

Grundfos offers a comprehensive range of rigid suction lances for a variety of chemical containers.

Rigid suction lances are installed at the lower end of the inlet hose. They are available either without level indication or with low-level and empty-tank indication. Their immersion depth is adjustable.

Rigid suction lances include:

- strainer (mesh size approx. 0.8 mm)
- non-return valve
- hose connection set: 4/6 mm, 6/9 mm, 6/12 mm and 9/12 mm
- adjustable tank connection with holes, for example, relief line.

Rigid suction lances with low-level and empty-tank indication additionally include:

- reed-switch unit with 2 floaters
- 5 meters of cable with PE jacket
- M 12 plug to connect DDA, DDC, DDE or DDI dosing pump.

The contact type of the low-level and empty-tank indication is factory-set to NO. The contact type can be set to NC by turning the floaters upside down.

Electrical data of the level indication:

- max. voltage: 48 V
- max. current: 0.5 A
- max. load: 10 VA.

Emission protection kits

Gas emitted by liquid in a container can cause bad odour and corrosion. Emission protection kits help avoid such problems.

Rigid suction lances can be retrofitted with emission protection kits.

Two variants are available:

- Emission protection kit with snifting valve: no gas can escape from the container, but air can be drawn in.
- Emission protection kit for use with filter: gas can escape from the container and air can be drawn in. The kit can be connected to a filter by a 4/6 mm hose.

Emission protection kits include:

- gasket for the tank adapter
- snifting valve or hose nipple 4/6 mm (hose is not included)
- gasket for the cable outlet.

M 12-plug-to-flat-plug adapter

The adapter allows for connecting rigid suction lances or foot valves with level indication to pumps with a level input designed for flat plugs, for example, the DMX and the DMH with AR control unit.

Order data

Description	Product number
M 12-plug-to-flat-plug adapter	96635010

Injection units

Injection units connect the dosing line with the process line. They ensure a minimum counterpressure of 0.7 bar and avoid backflow of the dosing liquid.

In general, they include the following:

- injection pipe (PP, PVC and PVDF versions can be shortened)
- spring-loaded non-return valve with Tantal spring
- hose connection set: 4/6 mm, 6/9 mm, 6/12 mm and 9/12 mm
- pipe connection set: threaded, Rp 1/4", internal thread (stainless steel).

Injection units with lip valve

Injection units with lip valve are typically used for adding sodium hypochlorite solution to water with a high carbonate content. The FKM lip prevents crystallisation and blocking caused by alkali carbonate reactions at the point of injection.

Injection units with ball valve

Injection units with ball valve are used for applications where the injection point must be closable. The ball valve is placed between the injection pipe and the spring-loaded non-return valve.

- The dosing line can be completely disconnected from the process.
- The non-return valve can be dismantled and cleaned without stopping the process and emptying the process line.

Injection units with removable injection pipe

Injection units with removable injection pipe are used where regular cleaning of the injection pipe is required. The injection pipe can be removed from the process line without stopping the process water flow. The injection point can be closed with the integrated ball valve. The immersion depth of the injection pipe can be adjusted.

Hot-injection units with ball valve

Hot-injection units with ball valve can be used for direct injection of the dosing medium into processes with a high process water temperature of up to 120 °C. Hot-injection units have a stainless-steel injection pipe and a bendable stainless-steel cooling pipe of 1 metre. The stainless-steel ball valve is installed between the injection pipe and the cooling pipe. The cooling pipe separates the hot parts from the non-return valve and the dosing line.

Multi-function valves, pressure relief valves, pressure loading valves

Multi-function valves combine the functions of pressure relief valves and pressure loading valves. In addition, they allow de-aeration of the pump and emptying of the outlet line for maintenance.

Pressure relief valves protect the pump and the outlet-side installations against excessive pressure. All pressurised dosing installations should include a pressure relief valve.

Pressure loading valves maintain a certain counterpressure for the dosing pump.

They are used in the following cases:

- too low counterpressure or no counterpressure at all
- fluctuating system pressure with outlet-side pulsation damper
- to prevent syphoning when the inlet pressure is higher than the counterpressure.

TM086554

Multi-function valve, pressure relief valve, pressure loading valve

Multi-function valves

A multi-function valve is mounted directly on the pump outlet side. The top connection is for the outlet line, the side connection leads the relief liquid back into the tank.

- Loading pressure, adjustable from 1 to 4 bar, is factory-set to 3 bar.
- Relief pressure, adjustable from 7 to 16 bar, is factory-set to 10 bar or 16 bar.
- Maximum operating pressure: 16 bar.
- Hose connection set: 4/6 mm, 6/9 mm, 6/12 mm, and 9/12 mm.

Dimensions

Pressure relief valves PRV

Pressure relief valves are installed in the outlet line near the pump, using the 2 in-line connections. The side connection leads the relief liquid back into the tank.

- Relief pressure, adjustable from 5 to 10 bar, is factory-set to 10 bar.
- Relief pressure, adjustable from 7 to 16 bar, is factory-set to 16 bar.
- Maximum operating pressure: 16 bar.
- Hose connection set: 4/6 mm, 6/9 mm, 6/12 mm, and 9/12 mm.
- Pipe connection set: threaded, Rp 1/4", internal thread (stainless steel).

Pressure valves

Pressure valves provide a constant counterpressure of 3 bar. They are particularly required for the DDA-FC or DDA-FCM pumps at very small flow rates.

Pressure valves are installed either directly on the pump outlet side, or on the pressure relief valve.

- Loading pressure: 3 bar, not adjustable.
- Maximum system pressure: 16 bar.
- Spring material: Alloy C-4 (NiMo16CrTi, material number 2.4610).
- No connections included.

Pump connection kits and inlay kits

Retrofit pump connection kits and inlay kits are available for the integration of Grundfos standard dosing pumps into installations with various sizes of hoses or pipes.

A pump connection kit includes the following:

- 1 set of inlays
- 1 union nut.

The inlay kits are used for connecting pumps and accessories to pipes or hoses that differ from Grundfos standard sizes.

An inlay kit includes the following:

- 2 sets of inlays.

Dosing tanks

Square tank, 100 litres

The closed square tank has a screw cap and a mounting platform for one pump or two pumps in parallel.

The pump mounting platform is higher than the screw cap to protect pumps and connections when filling chemicals into the tank.

Characteristics of the tank:

- Tank material: MDPE
- weight: 15 kg
- wall thickness: 4 mm
- liquid temperature: -20 °C to +45 °C.

SMART Digital S pumps can be fitted directly on the mounting platform by brass inserts moulded into the platform. For other pumps, a bracket is required.

The square tank is prepared for a G 3/4" drain valve.

When using a rigid suction lance in the tank, choose the counter nut for fixing, see section Adapters for containers.

Cylindrical tanks

Dosing tanks are intended for storing and dosing liquids. Different tank accessories can be mounted directly to the tank. Cylindrical tanks are available in transparent or black. They have a litre scale and a black screw cap.

Characteristics of the tank:

- Tank volume: 40-1000 l
- tank material: LLDPE, UV-stabilised
- liquid temperature: -20 °C to +45 °C.

All cylindrical tanks are prepared for a G 3/4 opening for a drain valve, and have a screw plug (PE or EPDM).

The cylindrical tanks with volumes of 60, 100, 200, 300 and 500 litres additionally include the following:

- threaded M 6 inserts for the direct assembly of a dosing pump
- G 2 opening for a rigid suction lance or a foot valve, closed with a screw plug
- threaded M 6 inserts at the bottom part for floor mounting with a set of floor-mounting brackets
- flange for an electric stirrer with threaded inserts.

The cylindrical tanks with volumes of 60, 100, 200, 300, 500 and 1000 litres can optionally be prepared for direct assembly of an electric stirrer:

- with opening for electric stirrer (60-500 l)
- with opening and reinforced beam for holding an electric stirrer (1000 l).

*Handheld mixer***Technical data**

Description	Specifications	Material	Product number
Drain valve for installation in the threaded sleeve of the dosing tank	Dosing tank connection G 3/4"	PVC	96689132
Ventilation valve	Spring-loaded, opening pressure 0.05 bar	PVC / FKM / glass	96694401
Dissolving hopper for washing powders into the dosing tank	Dosing tank connection: DN 40 through-bolt Water connection: G 5/4", with union nut and inlay for PVC pipe (cementing diameter 25 mm)	PVC	96726979
Handheld mixer for use in dosing tanks	Shaft length 1200 mm, length can be adapted to the corresponding dosing tank with DN 15 through-bolt for connection at the dosing tank	PE	98133793
Set of floor-mounting brackets	4 floor-mounting brackets with fixing screws		98149921
Set of screws for mounting a pump on a 100-litre square tank	For pump types DDA, DDC, DDE	Stainless steel	95730862
Set of screws for mounting a pump on a 60-, 100-, 200-, 300-, or a 500-litre cylindrical tank	For pump types DDA, DDC, DDE, DDI, DMX model 221	Stainless steel	98159495
Set of screws for mounting a pump on a 40-litre or a 1000-litre cylindrical tank	For pump types DDA, DDC, DDE, DDI, DMX model 221	PP	95730864

Water meter

The in-line water meter with potential-free pulse signal is suitable for use in flow-proportional dosing applications.

- Qn 1.5 and Qn 2.5 meters are of the multi-jet, dry dial type, for cold water up to 30 °C, or hot water up to 90 °C.
- Qn 15 meters and up are of the helical vane type, for cold water up to 50 °C, or hot water up to 120 °C.
- Max. pressure: 16 bar.

If the water meter is connected directly to the pump pulse input, use a control plug (PN 96698715).

- Qn 1.5 to Qn 15 meters are threaded.
- Qn 40 to Qn 150 meters are flanged.
- Cable length: 3 m.

9. Pumped liquids

The resistance table below is intended as a general guide for material resistance (at room temperature), and does not replace testing of the chemicals and pump materials under specific working conditions.

The data shown are based on information from various sources available, but many factors, such as purity, temperature, abrasive particles, may affect the chemical resistance of a given material.

Some of the liquids in this table may be toxic, corrosive or hazardous. Be careful when handling these liquids.

● = Resistant

○ = Limitedly resistant

- = Not resistant

Pumped liquid (20 °C)			Material

Pumped liquid (20 °C)			Material								
Description	Chemical formula	Concentration %	Dosing head			Gasket			Ball		PE (Accessories)
			PP	PVDF	SS 1.4435	PVC	FKM	EPDM	PTFE	Ceramic	
Sulphuric acid ⁴⁹⁾	H ₂ SO ₄	< 80	•	•	-	•	•	○	•	•	•
		80-96	○	•	-	•	•	-	•	•	-
		98	-	•	•	-	○	-	•	•	-

⁴⁷⁾ Once the pump stops, calcium hydroxide sediments rapidly.

⁴⁸⁾ There is risk of crystallisation.

⁴⁹⁾ It reacts violently with water and generates much heat. (The pump should be absolutely dry before dosing Sulphuric acid.)

10. Grundfos Product Center

Online search and sizing tool to help you make the right choice.
From the international view, you can select your specific country to view the product range available to you.
International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you will see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

Pos.	Description
1	Products & services enables you to find products and documents by typing a product number or name into the search field.
2	Applications enables you to choose an application to see how Grundfos can help you design and optimise your system.
3	Products A-Z enables you to look through a list of all the Grundfos products.
4	Categories enables you to look for a product category.
5	Liquids enables you to find pumps designed for aggressive, flammable or other special liquids.
6	Product replacement enables you to find a suitable replacement.
7	WWW enables you to select the country, which changes the language, the available product range and the structure of the website.
8	Sizing enables you to size a product based on your application and operating conditions.
